

Dear Trinity Parents and Community:

Welcome to the 2018-2019 School Year!

I hope that you had time during this summer to do some of the activities that you do not get to do during the school year.

While summers at Trinity are much less active than the school year, we have been busy preparing for the upcoming year. Various professional organizations offer staff development opportunities during the summer. Our faculty and administration have participated in these endeavors. Many of us enjoy attending these workshops because we have the time to plan how we can implement what we have learned in the upcoming year. The office staff has been busy organizing the materials that are needed throughout the year; the maintenance and janitorial staff have been getting the building ready.

Much time was devoted to updating the resources that are used in the technology areas of our school program. We are acquiring a 3D printer that will be used by students during the school year. Projects using this tool will give students an opportunity to learn using different ideas and modalities. STEM concepts will become more concrete and realistic for them.

In early August you received a detailed letter regarding the opening of school. Important dates are posted on the calendar section of our website (left side). The supply lists and summer learning packets are also posted on the website (top and right side).

The beginning of a new school year is always and exciting. We, as educators, have the opportunity to plant seeds that will blossom in the spring. Very few professions have this privilege.

All of us at Trinity look forward to working with your children, our students.

Here's to a wonderful year!

Miss Morcone
Principal
