

Solving Equations

Remember that an equation differs from an expression because an **equation has an equal sign**. Often times you need to solve for a variable when solving equations.

When solving equations, we use need to use **inverse operations** to isolate the variable. This concept is very important during this year. Inverse operations are opposites of each other.

Addition and Subtraction

Division and Multiplication

» Proper work is showing how you are using inverse operations correctly to isolate the variable.

$$\begin{array}{l}
 x + 3 = -15 \\
 \underline{-3 \quad -3} \\
 x = -18
 \end{array}
 \qquad
 \begin{array}{l}
 y - 17 = -20 \\
 \underline{+17 \quad +17} \\
 y = -37
 \end{array}$$

$$\begin{array}{l}
 -5x = -90 \\
 \underline{\div -5 \quad \div -5} \\
 x = 18
 \end{array}
 \qquad
 \begin{array}{l}
 a/2 = -3 \\
 \underline{\cdot 2 \quad \cdot 2} \\
 a = -6
 \end{array}$$

Remember to show proper work and follow integer rules!

You Try:

1. $\frac{4r}{4} = -32$ 4 4 $r = -8$	2. $w - 7 = -12$ 17 +7 $w = -5$	3. $k + 13 = -45$ -13 -13 $k = -32$
4. $n - 6 = -2$ +6 +6 $n = 4$	5. $7 = a - 5$ +5 +5 $12 = a$	6. $d/6 = -3$ 6 6 $d = -3 \cdot 6$ $d = -18$
7. $\frac{-6g}{-6} = \frac{72}{-6}$ -6 -6 $g = -12$	8. $4 = f/-4$ $-4 \cdot 4 = \frac{f}{-4} \cdot -4$ $-16 = f$	9. $q + 2 = -15$ -2 -2 $q = -13$ $-15 + 2$

10. $y - 8 = -34$ +8 +8 $y = -26$	11. $-15 = h/5$ $5 \cdot -15 = \frac{h}{5} \cdot 5$ $-75 = h$	12. $15c = -45$ 15 15 $c = -3$
---	---	--

Tim solved the equation $x + -4 = -20$ as follows. What error did he make and what is the correct solution?

 $x + -4 = -20$ $+ -4 + -4$ $x + 0 = -24$ $x = -24$ 	$x + 4 = -20$ -4 -4 $x = -16$ $-20 + 4$
--	--

HW: WB p. 73 evens and #23
